DETAILED ACTION

This office action is in response to the amendment filed 6/3/05. A new ground of rejection is introduced as necessitated by amendment.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites "a current mirror..." and "a comparator..". Figure 6 shows that the current mirror is a part of the comparator. Therefore, it is misdescriptive to disclose the current mirror and the comparator separately.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Fischer (USP 6288525).

As to claim 1, Fischer's figure 3 shows a bandgap voltage reference circuit comprising: a first circuit (Q17, 8, 9, Q8)) providing a first voltage representative of V_{be} of a first bipolar transistor (Q17); a second circuit (Q1) providing a second voltage ΔV_{be} representative of the

difference of two V_{be} voltages of two bipolar transistors (two of the remaining transistors); and a comparator (the remaining transistors and 10) receiving voltages representative of V_{be} and ΔV_{be} and an output (output) coupled to the base of the first bipolar transistor whereby a voltage representative of the sum of respective constants multiplying V_{be} and ΔV_{be} is provided at the output of the comparator (equation 9 in column 5).

As to claim 3, because circuit figure 3 is a bandgap voltage generator, it is inherent that the output voltage independent of temperature.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
